

Evaluations Module

The Evaluation Module allows for the building and deployment of audits across your entire Organization. Audit Scoring is user definable, allowing for, but not limited to, Yes/No, High/Medium/Low, Red/Yellow/Green, 1/2/3/4/5, etc. You have the ability to attach a weight to each individual question and allow the application to calculate the compliance percentage per question/element/assessment/facility and then roll the data up, comparing all locations within the organization. Audits can be cross disciplined (Quality, EHS Audits, Security Audits, SOX, etc.) where only the "owners" and their team members have access to their audits and the data. As part of the AIC Platform users have access to attach supporting documentation and files to each question, assign corrective or preventative actions, hyperlink to Directives, Guidelines, SOPs, ISO Standards found on the internet or on the company intranet, and access your audit protocols from mobile devices. AIC also offers the OGP Auditor app which is a free application that can be used to conduct audits on handheld devices (iPad, iPhones, Androids, Tablets, etc.) online or offline with syncing capabilities. All of your Evaluation Data and Scores can be extracted in reports and shown visually through the KPI Dashboards.
