

Global Notifications Module

The AIC Global Notifications Module provides a powerful corporate wide corrective action/preventative tracking tool and a mechanism for the easy communication of vital information to the corporate community. All Corrective/Preventative Actions within the AIC One Global Platform® are enforced by Alerts to both the Responsible Party and vested parties at a Location, Regional, Divisional or Corporate Level (where the system administrator has full control over the timing).

Also part of the Global Notifications Module is the ability to send system wide messages, general tasks, and/or notifications to all users, employees, supervisors, or a combination of individuals as desired. The mechanism for easy communication is integrated with an AIC HTML editor allowing for customized message creation as well as the attachment and inclusion of supporting documentation. All emails sent are date/time stamped providing full audit trail capability of who was sent what and when. Lastly, this solution also allows for KPI Scorecards and ad-hoc Reporting capabilities that can be scheduled for automated delivery to ensure all vital information is tracked and visually presented to the organization in reports and dashboards.
