Leading Indicator Module

The Leading Indicator Module is a powerful analytical tool used to define a list of leading and lagging indicators and ultimately use these to design customized scorecards for ensuring compliance with specific metrics that are important to your Organization. Set goals and track your progress against the goal. Location based scorecards can be shared across all users at a location or group of locations while the Executive scorecard will allow for assignment to individual employees requiring each person to complete their own metrics. Define whether goals will be evaluated on a monthly, quarterly, or yearly basis with the added ability to track progress to the overall goal on a monthly basis. Responsible individuals at the Location level will receive a monthly email that can be used to update their data directly from an embedded hyperlink without ever having to log into the application. Set up automated reminders to be sent to a customized list of recipients as a reminder when data is not entered by a certain day of the month. The raw monthly data entered into the system can in turn be extracted in a report format as well.
